

Enclosure Heating and Cooling Solutions

NVENT HOFFMAN FREE THERMAL AUDIT SERVICE

What is an nVent HOFFMAN Thermal Audit?

A thermal audit is a FREE service that Hoffman reps and distributors provide, which includes:

Enclosure Inspection

A Hoffman specialist will identify and inspect every enclosure and cooling unit in your facility as well as analyze the environment.

Thermal Analysis

The specialist will then take an in-depth look inside your enclosures to identify problematic electronics and components.

Thermal Audit Report

After an audit is conducted, a personalized report will be provided of all the enclosures with solution recommendations.

How does a Hoffman Thermal Audit Work?

A thermal audit quickly identifies problem areas and offers compelling evidence of excess heat that can affect performance and potentially damage your critical equipment. We will then recommend HOFFMAN enclosure heating and cooling solutions to help you maximize uptime and reduce maintenance costs.

Benefits of a Hoffman Thermal Audit

Extend operational life

Prevent catastrophic failure

Sustain productivity

Maintain equipment warranties

Contact your local nVent HOFFMAN Distributor to request a free thermal audit today!
